Alandi Area of Water Pollution

Introduction :

Today morning, the holy Indrayani river in Alandi, a significant pilgrimage site in Alandi Maharashtra, once again witnessed pollution fumes indicating the ongoing environmental crisis despite measures taken by the state government & local authorities.

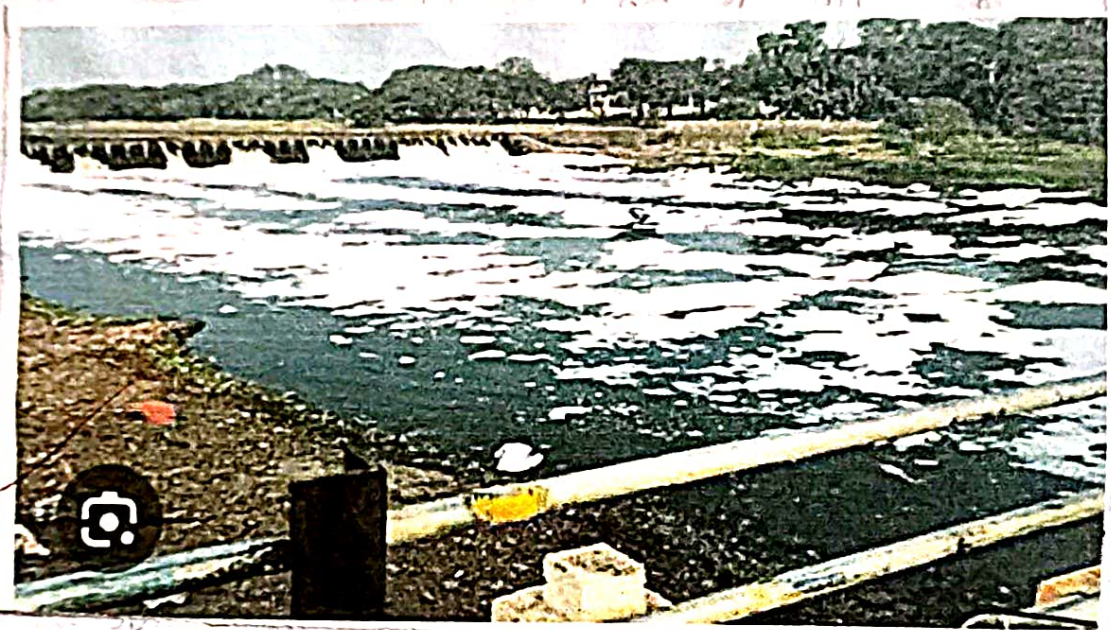

In Alandi, water comes through the PCMC area. Until the river reaches the Chikhali Kudalwadi area, it gets polluted due to various reasons. We have a big embankment here & when the river water falls from it, the water turns foamy. We are co-ordinating with other authorities to solve this issue.

Pimpri Chinchwad Municipal Corporation (PCMC) in Maharashtra, which combines industrial & residential areas, faces challenges due to industrial discharges & rapid urbanization. Inadequate waste management further heightens pollution risks, necessitating strict regulations, improved infrastructure & community awareness.

Although there is a lot of water pollution

Introduction

Today we are going to discuss the water pollution in Punjab. It is a very important topic.

falls from it, the water flows down. This is a very common problem in Punjab.

one coordinated with other countries to solve this issue.

Punjab Chemicals Corporation (PCC) is a major industrial unit in Punjab.

It is essential to take steps to control water pollution in Punjab.

Industrial effluents are a major source of water pollution in Punjab.

Therefore, it is necessary to take steps to control water pollution in Punjab.

The river is reportedly polluted as a result of untreated industrial & domestic waste being identified at various points along the river, from Lonavala to Alandi, which fall under the jurisdiction of several local authorities.

"The river is getting polluted to industrial waste released in the river. These units are also located outside PCMC jurisdiction & MPWB can take action against them", he said.

Meaning :-

As per the citizen, the untreated water, chemicals & toxic waste released from industries & untreated water from laundries is the prime reason behind the pollution. Despite the river's religious significance & its course through pilgrimage sites like Dehu & Alandi, the problem has been recurring.

Defination

"Water pollution is what happens when various harmful substances get into a body of water, such as a stream, river, ocean & contaminate it".

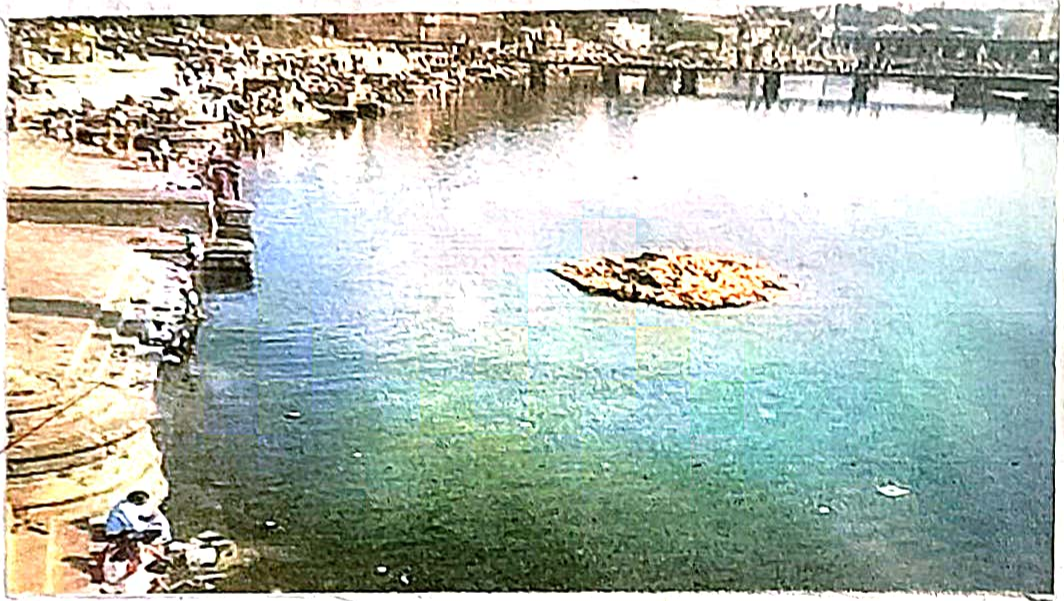

Water pollution is the contamination of water bodies (eg. lakes, rivers, oceans, aquifers & ground water). Water pollution occurs when pollutants are ~~directly~~ or indirectly discharged into water bodies without adequate treatment to remove harmful compounds.

objectives

Systems designed to remove waterborne wastes from communities, industries & so on while protecting the health of people & the environment.

1) To collect waste water from residences, industries, institutions & so on

2) To find a place to discharge the waste water (usually the nearest water course is chosen but waste water could also be used for ground water recharge or even recycled to water supply.)

3) To remove water pollutants that would produce adverse impacts to the receiving water or adversely affect the health of people subsequently using the water

4) To do all the above in a cost-effective manner.

Examples of water pollutants of concern

1) Biochemical oxygen demand (BOD)
oxygen demanding materials that people deplete the oxygen content of the receiving water.

2) suspended solids =
causes the water to be turbid & contain other pollutants

3) pathogens =
disease causing micro-organisms usually associated with fecal matter (fecal coliforms are indicator organisms)

4) Nutrients such as phosphorus & nitrogen cause accelerated growth of aquatic plants

5) Toxic chemicals =
Heavy metals such as mercury, cadmium & chromium & organic chemicals such as pesticides, industrial solvents & gasoline

Ammonia =

Toxic to fish

Importance =

The Indrayani River originates in Kuvande village near Lonavala, a hill station in the Shyadai mountains of Maharashtra India

Fed by rain it flows east from there to meet the Bhima river, through the Hindu pilgrimage centres of Dehu & Alandi.

It follows a course mostly north of the city of Pune. It is revered as a holy river & is associated with religious figures such as Sant Tukaram & Dnyaneshwar.

Water pollution depletes aquatic ecosystems & triggers unbridled proliferation of phytoplankton in lakes eutrophication contamination of the food chain.

The sediments carried by the rivers have made the land of Maharashtra fertile & these rivers have contributed immensely to the socio-economic fabric of Maharashtra.

Reasons of water pollution

Global warming = Rising global temperatures caused by CO_2 emissions heat the water, reducing its oxygen.

Deforestation =

Felling forests can exhaust water resources & generate organic residue which becomes a breeding ground for harmful bacteria.

Industry, agriculture & livestock farming =
Chemical dumping from these sectors is one of the main causes of eutrophication of water.

Rubbish & faecal water dumping =

The UN says that more than 80% of the world's sewage finds its way into seas & rivers untreated.

Maritime traffic =

Much of the plastic pollution in the ocean comes from finishing boats, tankers & cargo shipping.

- Fuel spillages =

The transportation & storage of oil & its derivatives is subject to leakage that pollutes our water resources.

Causes of water pollution

The main cause of the river's pollution is the mixing of treated or semi-treated & untreated domestic sewage from local bodies in the river through various drains.

Directions are issued by the board from time to time to local bodies to prepare a time bound plan for the entire sewage treatment.

While factories have to mandatorily treat industrial effluents in effluent treatment plants (ETPs) before discharging them into water bodies, most cities do not have infrastructure for treatment of domestic sewage.

This is one of the major causes for pollution in the rivers.

Spanning a length of 861 km, this river is flanked by the Western Ghats to the west, the Bala ghat Range to the north & the Mahadeo Hills to the south. The river's basin covers a total area of 48,631 sq. km with 75 percent of it located in the state of Maharashtra.

Effects of water pollution

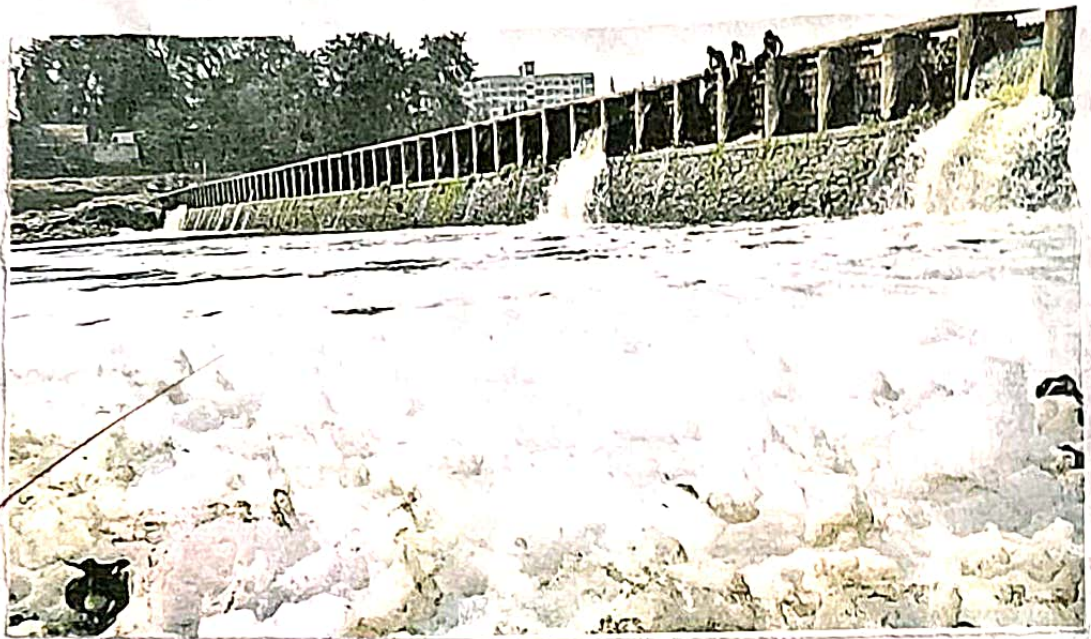

Environmental impact water pollution can harm aquatic life & disrupt ecosystems. The toxic chemicals & pollutants that enter the water can kill fish reduce biodiversity & harm the food chain.

It can also harm plants & animals living near the water source.

Human activities that generate domestic sewage & toxic waste cause water pollution by contaminating water with disease-causing micro-organisms & poisonous substances.

oil spills are another source of water pollution that have devastating impacts on surrounding ecosystems.

In the effects of water pollution in Indrayani river

conclusion =

Waste water treatment is done to remove contaminants from water.

It is broadly classified into primary secondary & tertiary treatments.

Water pollution stems from many sources & causes only a few of which are discussed here.

Therefore, Indrayani River is getting polluted due to domestic & industrial discharges which causes death of fishes, mostly mahseer.

We selected four important points of Indrayani river namely Kalvan dam, Kamshet, Indori & Dehu for the assessment of physico-chemical properties of water.

Rivers & streams demonstrate some capacity to recover from the effects of certain pollutants.

पण आजकाल वृक्षांच्या संख्या घुप जास्त कमी होत आहे

कारण पुणे चा वाढता शहरी कुरण पुणे मध्ये घुप जास्त शहरी कुरण वाढत आहे

महत्वाचा काम करते. माती जर खसव झाला
तर आपल्याला अन्न धान्य मिळत नसते.

जल प्रदूषण, वायू प्रदूषण, ह्र ध्वनी प्रदूषण, मृदा प्रदूषण
असे प्रदूषण आहेत.

जर आपण वेळे मध्ये प्रदूषण थांबवले नाही तर
खूप जास्त त्रास होवू शकतो.

आपण घर कुत्या स्वच्छ ठेवते तसा नियम पण स्वच्छ
ठेवणे गरजेचे आहे.
